a Earlier tests and this one

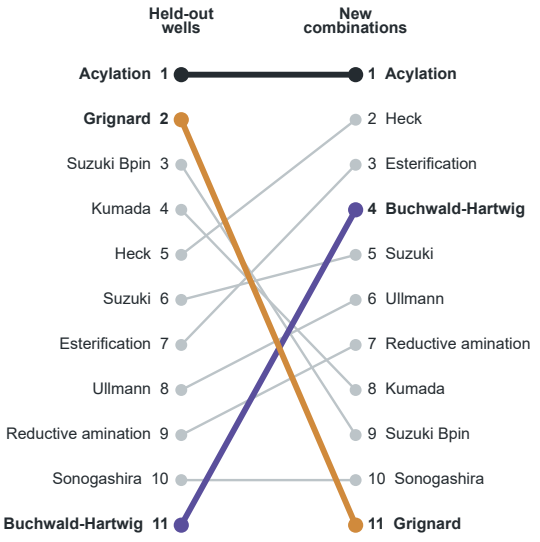

Study	Withheld from training; scope; endpoint
Sandfort 2020	a molecular component; yield
Ismail 2026	components or pairs; four HTE datasets; yield
Götz 2025	reactant dimensions; one three-component reaction; reaction outcome
Neves 2026	data sources; Buchwald-Hartwig; success class
This work	**whole pairs; 18 screens in 17 families; screen order compared between tasks**

b Two tasks on the same records

340,178 yields in 18 screens and 17 reaction families
One random-forest specification; five split seeds
Each plate holds a single substrate pair

c The order of screens does not survive

R^2 rank correlation 0.02 (11 screens)

d Pair-level variance tracks the R^2 lost
