a Identity explains most held-out-well R^2

b Gain falls with pair share

c The loss is at the pair level

d Median R^2 across the 11 screens

	Held-out wells	New combinations
Forest, pair level	0.82	0.23
Forest, within pair	0.34	0.34
Network, pair level	0.99	0.21
Network, within pair	0.48	0.39
Pretrained, pair level	0.81	0.19
Pretrained, within pair	0.34	0.33

On a new pair all three models lose most of their pair-level accuracy and far less of their within-pair accuracy.
